

## Let's Try Some

1. For Jillian's cough, her doctors says that she should take 8 tablets the first day and then four tablets each day until her prescription runs out. If there are 36 tablets, find the number of days she will take four tablets.

2. A furniture rental store charges a down payment of \$100 and \$75 per month for a table. Sarah paid \$550 to rent the table. Find the number of months Sarah rented the table.

3. At work Jack must stuff 1000 envelopes with advertisements. He can stuff 12 envelopes in one minute and he has 112 envelopes already finished. How many minutes will it take Jack to finish the task?
